

# FUNFUNCTION

## ANOTHER WAY TO UNDERSTAND OCCLUSION

FunFunction is a 2-day complementary course that is part of the 3STEP training program, it offers an innovative approach to gnathology, especially in the treatment of dysfunctional cases.

FRENCH

## FOLLOW OUR FUNFUNCTION COURSE AND BRING YOUR DENTAL PRACTICE TO THE NEXT LEVEL.

How many times have we told patients : “Go home and you will adapt to your treatment”? However the patient isn’t always able to do it.

Instead of imposing the same restoration pattern to all patients, the FunFunction course will teach you how to treat each patient uniquely and offer them a personalized analysis of their jaw’s functions

before and during therapy. The 3STEP Technique allows for a true rehabilitation – not just a reconstruction – of the dysfunctional patient.

Diagnosis and therapy will merge together into a theragnostic thanks to the observation of the dynamic aspects of the occlusion (e.g. chewing) and a cutting-edge additive approach

---

## PROGRAM AND LEARNING OBJECTIVES

---

### DAY ONE

- Understand that the 3STEP is more than a simple technique. It is a protocol and a guide that considers each patient uniquely.
- Identify the reconstruction errors of a patient who was misdiagnosed and incorrectly rehabilitated.
- Review the five points: Model - Arch - VDO - Posterior Space - White Bite
- Learn about the jaw movements
- Learn Planas' laws on the development of the mouth
- Learn the potential risks of a deep bite
- Define how a dentition should age
- Design a smile using an intelligent aesthetic

### DAY TWO

- Learn how to do a G test
- Classify the patients' way of chewing
- Evaluate the clinical conditions where the VDO increase could be problematic (i.e. unstable)
- Help clinicians collect the correct data before starting any treatment
- Orientate on clinical parameters when doing the first consultation with the patient
