FUNFUNCTION

Another way to understand occlusion

A 3STEP Academy
Course by Francesca Vailati

3STEPACADEMY

THE COURSE

FUNFUNCTION is a 2-day program that presents an innovative gnathological approach, especially in the treatment of dysfunctional cases.

How often do you find yourself saying, “Go home and adapt to the changes in your mouth,” after delivering restorations to patients?

However, can we really be certain that the patient is always able to adapt? What if this doesn't happen?

Instead of imposing the same occlusal scheme on everyone, the **FUNFUNCTION** course teaches participants to view each patient as unique and conduct a personalized analysis of their function. This approach allows them to propose a tailor-made rehabilitation therapy to every patient.

Thanks to the observation of the **DYNAMIC** aspects of occlusion (e.g., chewing) and the **ADDITIVE** nature of the **3STEP**, this course enables practitioners to offer genuine **REHABILITATION** to dysfunctional patients and not just a reconstruction.

What works well, wears less, and ages better. This means that restorations in a **REHABILITATED** mouth, and not just a reconstructed mouth, will have fewer problems and will last longer.

3STEPACADEMY

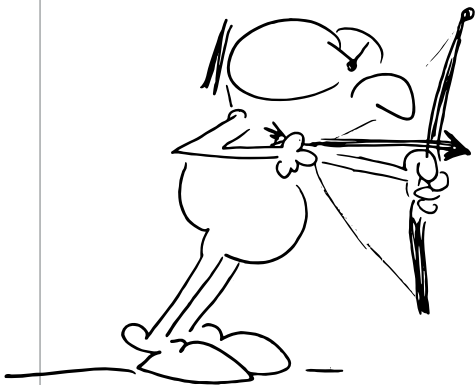

THE PROGRAM

DAY 1

- 1.30 h Why Gnathology?
- 1.30 h Advanced Diagnosis
- 1.30 h Anterior Functional Conflicts
- 1.30 h **HANDS ON**
3STEP Functional Exam

DAY 2

- Introduction to the occlusal adjustments
- Chewing Patterns
- The GTest
- HANDS ON**
The GTest

THE OBJECTIVES

- CLASSIFY the chewing patterns of patients
- LEARN how to do and read the results of a GTest
- UNDERSTAND the Anterior functional conflicts that lead to incisal edge wear
- UNDERSTAND the functional causes that led to the damage (fracture of the restorations, wear of the teeth, occlusal instability)
- INTRODUCTION to the occlusal adjustments

To your functional questions...
this course will have all the ANSWERS!

ADVANCE DIAGNOSIS

Have you reconstructed the functional space before restoring the anterior worn-down teeth?
If not, failure is likely to occur.

ANTERIOR FUNCTIONAL CONFLICTS

If the incisal edges break down,
is the patient a bruxist?

FUNCTIONAL ANALYSIS

Can you analyse the function and dysfunction of every patient in a few minutes using the 3STEP desert island protocol?

GTest & OCCLUSAL ADJUSTMENTS

Do you know where to touch and why?
